

Core Notes Plugin

Complete Feature Overview & Highlights

FEATURE	DESCRIPTION	KEY BENEFIT
1. Design, Layout & Export		
Print-Ready Formats	Generates A4 & US Letter layouts perfectly adhering to Cornell geometry. Includes customizable column widths, fonts, and summary heights.	No layout breaks; export and print flawless academic notes instantly.
Auto-Saved YAML Layouts	Layout adjustments made via the settings menu are automatically saved directly into your .md file's YAML frontmatter.	Configure a layout once per file. Your specific widths, margins, and fonts are permanently preserved.
Smart Backlink Handling	Keeps Zettelkasten networks fully active in Obsidian edit mode, but automatically hides internal links in Page View.	Maintain a robust knowledge graph without cluttering your printable notes.
Multi-Column Flexbox	Position text, code, diagrams, and media side-by-side. Adapts intelligently to lists, markdown tables, and varied image formats.	Overcome standard markdown layout limits for true visual freedom.
1-Click Social Sharing	Capture high-quality images of your notes directly from the Page View and share them seamlessly to platforms like Discord, Reddit, TikTok, or X.	Easily share your insights and collaborate with peers and online study communities.
2. The Invisible AI Engine		
Real-Time Lecture Processing	Select messy, rapidly jotted fragments during live lectures. The AI acts as a powerful coding tool, automatically generating code for professional graphics (70+ types) and complex Obsidian Markdown (like tables), making true live Cornell Notes possible.	Focus entirely on the live lecture, not on complex syntax or table formatting.
AI Prompt Management System	A flexible system that lets you manage and switch between custom AI profiles. You can design and select specific prompts to precisely shape the AI's output for your academic use cases.	Tailor the AI's behavior exactly to your subject without typing repetitive instructions.
Diagrams & Markdown Tables	AI generates 70+ diagram types (LaTeX/MathJax, Plotly, Mermaid, SMILES) as well as structured markdown tables. Just provide rough text, and the AI builds the perfectly formatted syntax.	Instantly render complex graphs and tables without special skills or memorizing markdown.

FEATURE	DESCRIPTION	KEY BENEFIT
Provider-Agnostic (BYOK)	Connect cloud APIs (OpenAI, Gemini) via custom keys or run 100% free open-source models (Ollama, LM Studio) locally.	<i>Zero hidden subscription costs and absolute control over your AI stack.</i>
3. The Complete Learning Pipeline		
Learning Pipeline: Notes to Exam Prep	A holistic learning pipeline: from live Cornell note-taking, to active engagement in the post-processing phase, straight to the final exam preparation phase (via Anki or Blur mode). Consolidates your entire academic workflow into one seamless, unified system.	<i>Choose your preferred workflow (Core Notes + Anki or Core Notes + Recall plugin) and unify your entire academic process.</i>
Interactive Blur Mode	Click to blur or unblur granular sections of your document directly inside the layout. Features adjustable difficulty levels (blur radius/opacity).	<i>Turn static notes into an active study session without third-party apps.</i>
AI Flashcards & Anki Export	Let AI generate graded Q&A flashcards from concepts. Export to Anki (.txt) with one click, or study natively using the open-source community Recall plugin (supports Anki, SM2, and Leitner algorithms).	<i>Slash your study time by using spaced repetition.</i>
Zotero .ris Integration	Extracts your Obsidian tags into a standard Zotero .ris code on your clipboard, pairing perfectly with the plugin's text-layer PDF/HTML export.	<i>Saves time by automatically transferring your keywords into Zotero.</i>
4. Privacy & Seamless Updates		
Seamless 1-Click Updates	Fully integrated, pain-free update mechanism via the plugin settings (bypassing the community store). Updating your first vault opens a 30-minute window to roll out the plugin update to up to 5 additional devices or vaults.	<i>Effortlessly keep your plugin up to date across up to 6 of your personal vaults.</i>
Local-First Architecture	All data and vaults stay securely on your device. Zero mandatory cloud tracking. Offline rendering for all major components.	<i>Total data sovereignty, keeping your intellectual property secure.</i>
